

Manufacturing instructions for applying VizLite DT tape

VLDT-7050

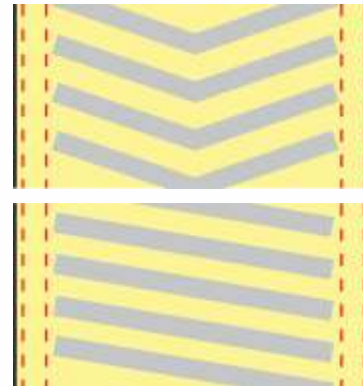

The tape will be supplied with a single stitch line attaching each strip of the 10mm photoluminescent to the reflective tape. This stitch will run down the inner side of the photoluminescent strip, 1mm away from the edge. This diagram illustrates the tape as it is supplied with the stitch lines shown in black.

During manufacture the VizLite® DT tape will need to be attached to the garment with two stitch lines on either side. The additional stitch lines needed will be along the outer side of the photoluminescent strip, 1mm away from the edge and to the reflective tape, 1mm away from the inside edge of the photoluminescent tape. Please refer to the diagram, the additional stitch lines are shown in red.

Chevron & Kiss cut

The VizLite® DT chevron and kiss cut tapes will be supplied as tape only, with no stitch lines prior to manufacture. During manufacture the chevron and kiss cut VizLite® DT tapes will need to be attached to the garment with two stitch lines on either side. The first will be 1mm away from the edge of the photoluminescent, the other will be 1mm away from the reflective design. Please refer to the diagram for the placement of the stitch lines shown in red.

10mm DT

The 10mm VizLite® DT tape will be supplied as tape only, with no stitch lines prior to manufacture. During manufacture the tape needs to be attached to the garment with two stitch lines running down 1mm away from either edge of the tape. Please refer to the diagram for the placement of the stitch lines shown in red.
